# CHAPTER 11: NORMALIZATION & JOINS

## Content:

1. What is normalization
2. Relationships
3. Joins
4. inner join
5. left join
6. right join
7. outer join
8. full join

# WHAT IS NORMALIZATION?

Database normalization is the process of structuring a relational database in accordance with a series of so-called normal forms in order to reduce data redundancy and improve data integrity.

# NORMALIZATION

## **First normal form**

- Eliminate repeating groups in individual tables.
- Create a separate table for each set of related data.
- Create separate fields for combined parts
- Identify each set of related data with a primary key.

## **Second normal form**

- Create separate tables for sets of values that apply to multiple records.
- Relate these tables with a foreign key.

## **Third normal form**

- Eliminate fields that do not depend on the key.

# NORMALIZATION

Unnormalized table:

| Student# | Advisor | Adv-Room | Class1 | Class2 | Class3 |
|----------|---------|----------|--------|--------|--------|
| 1022     | Jones   | 412      | 101-07 | 143-01 | 159-02 |
| 4123     | Smith   | 216      | 101-07 | 143-01 | 179-04 |

| Student# | Advisor | Adv-Room | Class# |
|----------|---------|----------|--------|
| 1022     | Jones   | 412      | 101-07 |
| 1022     | Jones   | 412      | 143-01 |
| 1022     | Jones   | 412      | 159-02 |
| 4123     | Smith   | 216      | 101-07 |
| 4123     | Smith   | 216      | 143-01 |
| 4123     | Smith   | 216      | 179-04 |

Students:

| Student# | Advisor | Adv-Room |
|----------|---------|----------|
| 1022     | Jones   | 412      |
| 4123     | Smith   | 216      |

Registration:

| Student# | Class# |
|----------|--------|
| 1022     | 101-07 |
| 1022     | 143-01 |
| 1022     | 159-02 |
| 4123     | 101-07 |
| 4123     | 143-01 |
| 4123     | 179-04 |

# Practice NORMALISATION

1. Observe the table below, Explain what normalization process you would apply to it to have a normalized dataset.

| Project Code | Project Name       | Project Manager | Project Budget | Employee No. | Employee Name | Department No. | Department Name | Hourly Rate |
|--------------|--------------------|-----------------|----------------|--------------|---------------|----------------|-----------------|-------------|
| PC010        | Reservation System | Mr. Ajay        | 120500         | S100         | Mohan         | D03            | Database        | 21.00       |
| PC010        | Reservation System | Mr. Ajay        | 120500         | S101         | Vipul         | D02            | Testing         | 16.50       |
| PC010        | Reservation System | Mr. Ajay        | 120500         | S102         | Riyaz         | D01            | IT              | 22.00       |
| PC011        | HR System          | Mrs. Charu      | 500500         | S103         | Pavan         | D03            | Database        | 18.50       |
| PC011        | HR System          | Mrs. Charu      | 500500         | S104         | Jitendra      | D02            | Testing         | 17.00       |
| PC011        | HR System          | Mrs. Charu      | 500500         | S315         | Pooja         | D01            | IT              | 23.50       |
| PC012        | Attendance System  | Mr. Rajesh      | 710700         | S137         | Rahul         | D03            | Database        | 21.50       |
| PC012        | Attendance System  | Mr. Rajesh      | 710700         | S218         | Avneesh       | D02            | Testing         | 15.50       |
| PC012        | Attendance System  | Mr. Rajesh      | 710700         | S109         | Vikas         | D01            | IT              | 20.50       |

# Practice NORMALISATION

1. Observe the table below, Explain what normalization process was applied to it to have a normalized dataset.

## Normalized Database

| Employee   |              |           |          |
|------------|--------------|-----------|----------|
| employeeID | employeeName | managerID | sectorID |
| 1          | David D.     | 1         | 4        |
| 2          | Eugene E.    | 1         | 3        |
| 3          | George G.    | 2         | 2        |
| 4          | Henry H.     | 2         | 1        |
| 5          | Ingrid I.    | 2         | 4        |
| 6          | James J.     | 3         | 1        |
| 7          | Katy K.      | 3         | 4        |

| Sector   |                |
|----------|----------------|
| sectorID | sectorName     |
| 1        | Administration |
| 2        | Security       |
| 3        | IT             |
| 4        | Finance        |

| Manager   |             |       |
|-----------|-------------|-------|
| managerID | managerName | area  |
| 1         | Adam A.     | East  |
| 2         | Betty B.    | West  |
| 3         | Carl C.     | North |

# Practice NORMALISATION

1. *Observe the table below, Explain what normalization process you would apply to it, to have a normalized dataset.*

Orders

| OrderNum | OrderDate  | PartNum | Description    | NumOrdered | QuotedPrice |
|----------|------------|---------|----------------|------------|-------------|
| 21608    | 10/20/2010 | AT94    | Iron           | 11         | \$21.95     |
| 21610    | 10/20/2010 | DR93    | Gas Range      | 1          | \$495.00    |
| 21610    | 10/20/2010 | DW11    | Washer         | 1          | \$399.99    |
| 21613    | 10/21/2010 | KL62    | Dryer          | 4          | \$329.95    |
| 21614    | 10/21/2010 | KT03    | Dishwasher     | 2          | \$595.00    |
| 21617    | 10/23/2010 | BV06    | Home Gym       | 2          | \$794.95    |
| 21617    | 10/23/2010 | CD52    | Microwave Oven | 4          | \$150.00    |
| 21619    | 10/23/2010 | DR93    | Gas Range      | 1          | \$495.00    |
| 21623    | 10/23/2010 | KV29    | Treadmill      | 2          | \$1290.00   |

# Practice NORMALISATION

1. Observe the table below, Explain what normalization process you would apply to it, to have a normalized dataset.

**Table 3. Unnormalized Table Employee**

| E# | ENAME | ESalary  |              |            |         |
|----|-------|----------|--------------|------------|---------|
|    |       | te_Value | te_ValidTime |            | te_Gran |
|    |       |          | te_Start     | te_End     |         |
| 1  | John  | 2000     | 03/01/2000   | 12/01/2003 | dd      |
|    |       |          | 01/01/2004   | 12/01/2005 |         |
|    |       | 2200     | 12/01/2003   | 01/01/2004 | dd      |
|    |       | 2500     | 12/01/2005   | 12/31/9999 | dd      |
| 2  | Peter | 2200     | 03/01/2000   | 06/01/2004 | dd      |
|    |       |          | 01/01/2005   | 08/01/2005 |         |
|    |       | 2500     | 06/01/2004   | 01/01/2005 | dd      |
|    |       |          | 08/01/2005   | 12/31/9999 |         |

# TYPES OF RELATIONSHIPS

One to One

One to many

Many to Many

# ONE TO ONE

For every record in the first table one and only one record exists in the second table.  
These are not common in relational databases

# ONE TO MANY

This is a far more common relationship. Each record in the first table (the parent) is related to one or more records in the second table (the child). Each record in the second table is related to one and only one record in the first table.

# MANY TO MANY

In a many to many arrangements each record in both tables can be related to zero one or many records in the other table.

The many to many relationships is broken into

In order to create a many to many relationships the join table must contain the primary keys of both tables joined by the relationship.

# RELATIONSHIPS EXAMPLES

One to one relationship

One to many relationship

Many to many relationship

# SQL JOINS

```
SELECT <select_list>  
FROM TableA A  
LEFT JOIN TableB B  
ON A.Key = B.Key
```

```
SELECT <select_list>  
FROM TableA A  
RIGHT JOIN TableB B  
ON A.Key = B.Key
```

```
SELECT <select_list>  
FROM TableA A  
INNER JOIN TableB B  
ON A.Key = B.Key
```

```
SELECT <select_list>  
FROM TableA A  
LEFT JOIN TableB B  
ON A.Key = B.Key  
WHERE B.Key IS NULL
```

```
SELECT <select_list>  
FROM TableA A  
RIGHT JOIN TableB B  
ON A.Key = B.Key  
WHERE A.Key IS NULL
```

```
SELECT <select_list>  
FROM TableA A  
FULL OUTER JOIN TableB B  
ON A.Key = B.Key
```

```
SELECT <select_list>  
FROM TableA A  
FULL OUTER JOIN TableB B  
ON A.Key = B.Key  
WHERE A.Key IS NULL  
OR B.Key IS NULL
```

# DIFFERENT TYPES OF SQL JOINS

## **(INNER) JOIN:**

Returns records that have matching values in both tables

## **LEFT (OUTER) JOIN:**

Returns all records from the left table and the matched records from the right table

## **RIGHT (OUTER) JOIN:**

Returns all records from the right table and the matched records from the left table

## **FULL (OUTER) JOIN:**

Returns all records when there is a match in either left or right table

# JOINS

```
SELECT Orders.OrderID, Customers.CustomerName, Orders.OrderDate  
FROM Orders  
INNER JOIN Customers  
ON Orders.CustomerID=Customers.CustomerID;
```

# INNER JOIN

The INNER JOIN keyword selects all rows from both the tables as long as the condition is satisfied.

This keyword will create the result-set by combining all rows from both the tables where the condition is satisfied i.e. value of the common field will be the same.

table1: First table.

table2: Second table

matching column: Column common to both the tables.

Note: We can also write JOIN instead of INNER JOIN. JOIN is the same as INNER JOIN.

# INNER JOIN

```
SELECT column_name(s)
FROM table1
INNER JOIN table2
ON table1.column_name = table2.column_name;
```

```
SELECT Orders.OrderID, Customers.CustomerName
FROM Orders
INNER JOIN Customers ON Orders.CustomerID =
Customers.CustomerID;
```

# FULL OUTER JOIN

FULL JOIN creates the result-set by combining result of both LEFT JOIN and RIGHT JOIN. The result-set will contain all the rows from both the tables. The rows for which there is no matching the result-set will contain NULL values.

table1: First table.

table2: Second table

matching\_column: Column common to both the tables.

# FULL OUTER JOIN

```
SELECT column_name(s)
FROM table1
FULL OUTER JOIN table2
ON table1.column_name = table2.column_name
WHERE condition;
```

```
SELECT Customers.CustomerName, Orders.OrderID
FROM Customers
FULL OUTER JOIN Orders ON Customers.CustomerID=Orders.Custome
rID
ORDER BY Customers.CustomerName;
```

# LEFT JOIN

This join returns all the rows of the table on the left side of the join and matching rows for the table on the right side of join. The rows for which there is no matching row on right side the result-set will contain null. LEFT JOIN is also known as LEFT OUTER JOIN.

table1: First table.

table2: Second table

matching\_column: Column common to both the tables.

We can also use LEFT OUTER JOIN instead of LEFT JOIN both are same.

# LEFT JOIN

```
SELECT column_name(s)
FROM table1
LEFT JOIN table2
ON table1.column_name = table2.column_name;
```

```
SELECT Customers.CustomerName, Orders.OrderID
FROM Customers
LEFT JOIN Orders ON Customers.CustomerID = Orders.CustomerID
ORDER BY Customers.CustomerName;
```

# RIGHT JOIN

RIGHT JOIN is similar to LEFT JOIN. This join returns all the rows of the table on the right side of the join and matching rows for the table on the left side of join. The rows for which there is no matching row on left side the result-set will contain null. RIGHT JOIN is also known as RIGHT OUTER JOIN.

table1: First table.

table2: Second table

matching\_column: Column common to both the tables.

Note: We can also use RIGHT OUTER JOIN instead of RIGHT JOIN both are same

# RIGHT JOIN

```
SELECT column_name(s)
FROM table1
RIGHT JOIN table2
ON table1.column_name = table2.column_name;
```

```
SELECT Orders.OrderID, Employees.LastName
Employees.FirstName
FROM Orders
RIGHT JOIN Employees ON Orders.EmployeeID =
Employees.EmployeeID
ORDER BY Orders.OrderID;
```

# SELF JOIN

```
SELECT column_name(s)
FROM table1 T1 table1 T2
WHERE condition;
```

```
SELECT A.CustomerName AS CustomerName1 ,
B.CustomerName AS CustomerName2, A.City
FROM Customers A , Customers B
WHERE A.CustomerID <> B.CustomerID
AND A.City = B.City
ORDER BY A.City;
```

```
SELECT A.CustomerName AS CustomerName1 ,
B.CustomerName AS CustomerName2, A.City
FROM Customers A
Left join customers B
On a.customerID = b.customerID
```

# MULTIPLE JOINS

```
SELECT customerName  
customerCity customerMail  
salestotal
```

```
FROM onlinecustomers AS oc
```

```
INNER JOIN
```

```
orders AS o
```

```
ON oc.customerid = o.customerid
```

```
INNER JOIN
```

```
sales AS s
```

```
ON o.orderId = s.orderId
```

# MULTIPLE JOINS

# Practice JOINS – RESTAURANT

## Sales

| customer_id | order_date | product_id |
|-------------|------------|------------|
| A           | 2021-01-01 | 1          |
| A           | 2021-01-01 | 2          |
| A           | 2021-01-07 | 2          |
| A           | 2021-01-10 | 3          |
| A           | 2021-01-11 | 3          |
| A           | 2021-01-11 | 3          |
| B           | 2021-01-01 | 2          |
| B           | 2021-01-02 | 2          |
| B           | 2021-01-04 | 1          |

## Menu

| product_id | product_name | price |
|------------|--------------|-------|
| 1          | sushi        | 10    |
| 2          | curry        | 15    |
| 3          | ramen        | 12    |

## Members

| customer_id | join_date  |
|-------------|------------|
| A           | 2021-01-07 |
| B           | 2021-01-09 |

1. How much money did each member spend at the restaurant?
2. What is the most purchased item on the menu and how many times was it purchased by all customers?
3. What is the total items and amount spent for each member before they became a member? \*\*

# Practice JOINS

1. *Display each employee's first and last name, as well as the job titles to which they belong.*
2. *Now include the department titles of each employee in the same results.*
3. *Display each employee's first and last name as well as the department and department's city where is located.*
4. *Determine which employees are managers on the employees table show the full name of the employee and the Manager s first name.*
5. *Show all the employees that work in the same department and they order by their department.*
6. *What is the total salary for paid by department?*

# Practice \*\*\*

1. Show the name, and surname of each employee, together with how many children they have
2. Show the firstname, their salary amount, and the difference between their salary and the min\_amount for their position – thus, how much are they getting more than the minimum amount for that role?
3. How many employees are based in each region?
